

quick start guide

preparing your file space

1. create a folder for lisp files & utilities supplied as part of this module
2. from the "Lisp Resources" are of the web-site download (i) the matcher and (ii) utils and put them in the new folder

NB: you may also want to download the breadth first search – we will be using this in the first 2-3 sessions.

starting the IDE

Allegro provides various versions of Lisp. You should use the modern version with IDE.

Unless you modify the IDE startup files (see note on configuring the IDE), each time you start the IDE you will need to do the following...

1. load the matcher using the file load button (see IDE overview)
2. type
 `(use-package :matcher)`
 at the allegro prompt in the evaluation window
3. load utils using the file load button
